SICOMAG BASED GRANULAR HIGH-TECH FERTILISERS (with special properties)

SICOMAG+Zn

40% MgO + 5% Zn in a single granule (2-4 mm)

- Origin: China -

1/ PRODUCT DESCRIPTION & TECHNOLOGY

Trade name : SICOMAG+Zn
HS Code : 382490
Release type : quickly and consecutively

Introduction: SICOMAG+Zn is a double element fertiliser specially developed to benefit from the mutual synergistic promotional effect of magnesium and zinc while being absorbed by crops. Their proportion is well matched to apply on soils and crops deficient in magnesium and zinc, using 3 core technologies.

2/ PRODUCT SPECIFICATIONS

*** CHEMICAL ANALYSIS**

Total magnesium oxide (MgO) : 40 min. %
Zinc (Zn) : 5 min. %
pH : 7.0 – 7.5

*** PHYSICAL PROPERTIES**

Appearance : whitish granules
Size : 2-4mm (pass by 90%)
Hardness : 2.0 min kg
Bulk Density : 912 kg/m³

3/ TECHNOLOGIES

*** SEMT Technology** : This technology provides variable nutrient release depending on the needs of specific plants and their environmental conditions. By scientifically combining quick-acting sulphates, chelated nutrients, intermediate-acting nutrients and slow-acting oxides, we are able to deliver multi-effect nutrients over time, in the form of a single granule fertiliser. **Meets the demands for magnesium and zinc nutrition for the six months following fertilisation.**

*** GRAN-TECH** : Advanced (Japanese) granulation technique results into superior appearance and composition: well rounded granules of consistent size, having high strength with low specific gravity. These characteristics make SICOMAG products particularly well suited for mechanical fertilisation.

*** TCR Technology** : Farmers are confronted with the problems of changing soil conditions and varying plant needs throughout the growth period. TCR technology can adjust granular fertilisers to delay or accelerate their release of nutrients to optimize the availability of nutrients over the environmental and growth cycles, effectively improving fertiliser utilisation and reducing the total amount of fertiliser that is required. **Transforms nutrition into a better absorbed state, improves the utilisation rate of magnesium and zinc.**

4/ RECOMMENDATIONS OF USE

- It can be used as straight fertiliser or as raw material in bulk blended fertiliser.
- Can be applied to various crops, such as oilseed rape, cotton, sugar beet, peanut, soybean, orange, apple, pear, banana, mango, tomato, cabbage, potato, corn, wheat, rice, sugarcane etc.
- Indicative use rates are to be used as a guide only:

Vegetables	: 105-185 kg/ha
Fruit	: 185-450 kg/ha
Other crops	: 100-175 kg/ha

5/ PACKING

In 50 kg net bags, about 24 MT/20ft container (loose bags).
