& DATASHEET**

MICRO - ATTACK SUPER

Special cotton plant food (water soluble powder)

DESCRIPTION

MICRO - ATTACK SUPER is a special cotton plant food, derived from sodium borate, zinc citric acid chelate and manganese citric acid chelate and other valuable micronutrients and incipients with biological activity.

GUARANTEED ANALYSIS

<u>PHYSICAL DATA</u>			
Appearance	Pale brown powder	Odour	Neutral
Solubility in water	100 %	Bulk density	0.950 g per litre
pH 1:100 w/v	4.5		
<u>CHEMICAL DATA</u>			
Nitrogen	5 %	Sulphur (SO ₃)	22.5 % (9 % S)
Calcium (CaO)	1 % (0.8 % Ca)	Magnesium (MgO)	4 % (2.4 % Mg)
Boron	5%	Copper	1 %
Iron	2 %	Manganese	1.5 %
Molybdenum	0.5 %	Zinc	2.5 %
Chelating/Complexing agent	EDTA, 2 hydroxy 1,2,3 propane tricarboxylic acid, lignopolycarboxylic acid		

GENERAL INFORMATION

- May be applied as a foliar spray with ground or aerial equipment.
- May be applied through irrigation equipment, drip, overhead sprinkler, furrow or flood.
- Is compatible with most pesticides and herbicides.
- Always add to sprayer tank first, before pesticide or other crop protection chemical.

CROPS

MICRO - ATTACK SUPER may be used on **cotton**, soybeans, peanuts, maize, cabbage, cauliflower, citrus, cucumbers, melons, onions, peas, tomatoes and most other crops.

DIRECTIONS FOR USE

1) Foliar application: Field, row, vegetable crops (cotton, peanuts, soybeans, tomatoes, etc.).

Apply 2.5 kg per hectare and follow up with a repeat application 2 weeks later (total of 5 kg per ha).

On non-sensitive crops such as cotton, soybeans and peanuts, apply the 5 kg in one application.

Apply after a minimum of 5 true leaves have developed and before flower initiation.

For irrigated cotton with exceptional yield expectations, a total of 10 kg per hectare may be used in split applications up to the appearance of the first speckled boll.

2) Irrigation and soil application: Please consult your supplier, extension service or consultant for application that will fit your particular situation.

PRECAUTIONARY STATEMENT

MICRO - ATTACK SUPER is manufactured as a water soluble powder for convenience, economy and performance. It is a **low pH** material and contains proprietary ingredients that have been shown to improve leaf penetration, plant assimilation and compatibility.

MICRO - ATTACK SUPER is a high quality product that should improve the crop's ability to produce high yields.

CAUTION

Excessive amounts of boron are toxic to some plants. Contact your local agronomist / supplier for more details.
