"SICOPONICS" Scientific Hydroponics – FEEDS RANGE

## **SICO DIAMOND GROWER A+B**

*To achieve optimum yields in the shortest possible time.*

03/2014

### **1. INTRODUCTION**

The SICO DIAMOND GROWER products are designed to be used by growers striving to achieve optimum yields from their crops in the shortest possible time. In combination with the SICO DIAMOND FLOWER range, they contain active constituents including amino acids, concentrated seaweed extract, plant available carbohydrates, vitamins, sugars and plant-extract betaines, gibberellins and cytokinins; all these naturally occurring raw materials are chosen from highly reliable sources to ensure 100% consistent results.

The SICO DIAMOND feeds range also contain very specific types of Humic and Fulvic acids particular to these formulations for greatly enhanced uptake and translocation of nutrients. There is much poor science and misinformation in the Humic and Seaweed sphere, and SICOPONICS products are based on well-proven SICO formulations and high science technology, **which offers an unequalled track record over many years** and widely differing growing conditions. We believe to have a unique understanding of the interaction between metal ions and plants in combination with certain classes of humic materials. Soil, Coco and Hydro formulations of each have been developed with variations that suit each medium.

### **2. PRODUCT DESCRIPTION**

SICO DIAMOND GROWER A and B are concentrated nutrients designed to provide primary nutrition in all flowering plants. Designed for effective use in hydroponic/soil/cocoa based growing systems. It is also effective as a foliar spray.

Use SICO DIAMOND GROWER A and B throughout the flowering stage to maximise yield and health over the shortest growing periods.

### **3. RATES FOR USE**

Hydro : 2-5ml per 1 litre water

Cocoa : 1-3ml per 1 litre water

Soil : 1-2ml per 1 litre water

### **4. PACKINGS**

Available in 1 litre, 5 litre and 20 litre packs
