## SICOFOL-TURF FOLIAR NUTRIENTS

*For golf and sports turf*

### **1. SICOFOL-TURF ARE SPECIAL FORMULATIONS DESIGNED FOR:**

- \* Long term storage stability
- \* Mixing, miscibility or dissolution in spray water
- \* Compatibility with other products in the sprayer
- \* Ability to cover the leaf surface
- \* Adhesion and rainfastness
- \* Cuticle penetration and leaf uptake
- \* Mobility and translocation

### **2. GENERAL INFORMATION**

Many types of soluble and liquid feeds are used for turf nutrition and most are of some value.

**However**, when nutrient uptake is the leaf, it is important that the product is carefully formulated for efficient absorption.

This absorption should take place not only through the stomata but also directly through the cuticle and epidermis and into the cellular structure of the leaf.

This is particularly important when using a 'spoon-feeding' nutrient programme for golf and sports turf.
