CARROT SEEDS

1. Amsterdam Forcing 2 'Amelie'

Excellent selection of Amsterdam 2 for bunching, fresh market and processing, also suitable for production under glass and early outdoors. Roots are long (15-19 cm), smooth, cylindrical and with stump end. Excellent in- and exterior red colour and with small core. Fast growing type, very suitable for early bunching.

2. Amsterdam Forcing 2 'Amice'

Long rooted selection of Amsterdam 2, especially for the processing industry. Early maturing and with short tops. Roots are long (16-20 cm), slim, cylindrical with stump end. Excellent in- and exterior red colour with small core. High yielder.

3. Baladis F1

Baladis is a new early hybrid in the Nantes type. The 15-19 cm. long roots are smooth and cylindrical. During the 14-18 week period from sowing to harvest, it develops into a uniform crop, giving a heavy yield. This hybrid's excellent internal and external colour makes it very suitable for processing as well as for fresh markets.

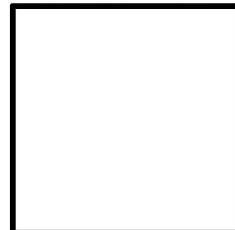

4. Balancio F1

This early Nantes hybrid produces a long (16-20 cm), smooth, slender and cylindrical carrot with a deep orange-red colour. Its intense colour and high productivity make this hybrid suitable for both processing and fresh market.

5. Berlikumer 2 Berba

Our medium late selection of the Berlicum type with excellent in- and exterior colour for fresh market, pre- and post-harvest packing and canning. The uniform smooth carrots have a cylindrical shape and a stump end. Root length is 20-23 cm. Suitable for storage.

6. Chantenay Red Cored 2 Chaba

Chaba is a medium early selection of the Chantenay type for late summer and autumn production. The carrots have wide shoulders and are conical in shape with a stump end. Length 13-15 cm. The deep orange colour makes Chaba highly suitable for canning, freezing and baby carrots.

7. Flakkese 2 Fivak

Flakkese type with excellent in- and exterior colour. The roots are slightly conical and have a stump end. Fivak is a high yielding variety, producing rather smooth carrots with a length of 20-24 cm. It is not susceptible for bolting. Excellent storage ability. For market and processing.

CARROT SEEDS

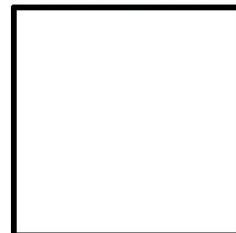

7. Kuroda

Especially developed for growing in tropical and sub-tropical areas. Well-suited for summer sowing and winter harvesting. The roots are uniform, conical in shape with a bright red-orange colour. Maturity is medium early in about 85 days from sowing.

8. Muscade

Cylindrical, half-long carrot with very sweet flesh. Variety recommended for Northern Africa. Suitable for growing under cold frame and outdoors. Sowing from the middle of August until the middle of October for harvest from December until March.

9. Nantes 2 Castle

Castle is an improved selection in the Nantes type. The 17-21 cm long roots are smooth, cylindrical with blunt end and fine core. Root colour is nice orange-red (in- and exterior). Foliage is medium fine. Maturity is medium early. Castle can be used for both fresh market and processing.

10. Nantes 5 Naba

Our Nantes selection with smooth, cylindrical roots. Carrot length is 18-22 cm. Naba has an excellent in- and exterior orange-red colour and can be used both for fresh market and processing. Good yielder.

11. Praiser Markt 4 Parceba

Our improved selection of the Paris Market type (Early French Frame), suitable for the processing industry and home garden use. Foliage is 35 cm in height and strong. Carrots are smooth, round in shape and small in size, with a diameter of 2 x 1.5 cm. Excellent interior and exterior colour. Parceba is very early, fast growing and suitable for mechanical harvesting.

12. Touchon Touba

A long Nantes type with slender, cylindrical roots with a stump end. Length is 18-22 cm. Touba is an early variety, producing smooth, uniform carrots with an attractive in- and exterior colour. Also very popular for its taste.
