# CAULIFLOWER SEEDS

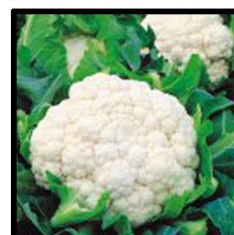

## 1. Rocky F1

Early maturing variety for tropical and sub-tropical areas. Tolerant to discolouration, heat and cold. It can be harvested 75-80 days from transplanting in Southern climates. Pure white colour, rather smooth and semi-dome in shape. Plant is medium large, upright and strong growing. Medium leaf-cover. Tolerant to Downy Mildew.

## 2. Batavo F1

Early maturity and some heat tolerance. It can be harvested ± 60 days from transplanting. Snow-white colour, rather smooth and flat-round in shape. Plant is a semi-erect type, medium large and strong growing. Medium leaf-cover. Excellent uniformity.

## 3. Basket F1

Basket is a hybrid variety with medium maturity (70 days from transplanting). The large plants, with greyish-green leaves and upright frame, give excellent cover to a deep, round, dense and pure white curd. Excellent uniform and high quality variety.

## 4. Balvany F1

For summer and autumn crops in Northern temperate climates and autumn-winter to early spring in Southern temperate climates. Maturity: 75-80 days from transplanting in Northern climates and 100-120 days in Southern climates. Plants are erect and vigorous and give excellent cover to the bright, white curds. Tolerant to Downy Mildew, Black Rot and Alternaria. For market and industry.

## 5. Erfurter (= Snowball A)

Very early maturing variety, which produces heavy yields. Sure heading, large, solid, pure white heads, good protected. Well adapted for autumn and winter production in semi-arid areas and for autumn and winter production in continental and desert climate. Vigorous strain for market and home garden.

## 6. All the year round

Extremely useful variety, which produces large, pure white heads with a first class flavour. All the year round remains in tip-top condition over a long period and is ideal for freezing. Ideal for growing in a cold frame, and for successional sowings all year round. Dark green leaves enclose a large, tight head.

## 7. Snowball Y

A medium-early variety with excellent uniformity produces white, deep, smooth, heavy, 17-18 cm heads. The plant offers fair inner-leaf protection and is well adapted to production in warm and mild regions. Maturity from transplanting is 65-70 days.

# CAULIFLOWER SEEDS

## 8. Igloo

For temperate and subtropical climates. Medium early to late. Large frame surrounding firm snow-white curd, medium vigour. For fresh market and industry (deep freeze). Gives very good results in autumn crops under subtropical conditions.
