# CUCUMBER SEEDS

## 1. Mini Cucumber - Anbar F1 (indoor crop)

Anbar is an all female, parthenocarpic hybrid, suitable for spring and autumn planting season. Plants have short internodes, medium side branching so only minimum pruning is needed. Fruits are dark green, slightly ribbed, 16-18 cm in length. Anbar gives high yields during a short and concentrated period. Highly resistant to Scab and intermediate resistant to Cucumber Mosaic Virus, Cucumber Vein Yellowing Virus and Powdery Mildew.

## 2. Mini Cucumber - Bangkok F1 (indoor crop)

Very early high yielding hybrid for protected cropping, for a concentrated harvest period. Bangkok has good vigour and an open plant habit. Multiple fruits per node. The fruits have a uniform shape, dark green colour, with an average length of approx. 17-19 cm. Bangkok is suitable for spring and autumn production. Highly resistant to Scab and intermediate resistant to Powdery Mildew.

## 3. Mini Cucumber - BB 031 F1 (indoor crop)

A very early all female hybrid, which produces multiple fruits per node. Fruits are of a very attractive dark green colour and are slightly ribbed. Length is 18-20 cm. Suitable for spring and autumn production. Highly resistant to Scab and intermediate resistance to Powdery Mildew.

## 4. Mini Cucumber - BB 011 F1 (indoor crop)

An all female, parthenocarpic hybrid, suitable for autumn and early spring plantings. Plants have moderate vegetation, which makes it easy for picking and pruning. Multiple fruits (1-3) per node. Fruits are dark green, slightly ribbed, 15-18 cm in length and with good firmness. BB 011 gives high yields during a concentrated harvest period. Resistant to Scab and tolerant to Powdery Mildew.

## 5. Long Cucumber - Bali F1 (indoor crop)

Early, all female flowering hybrid of the Long Dutch cucumber type, suitable for greenhouse production. The dark green fruits are very attractive, 32-34 cm in length, slightly ribbed, straight and without neck. Bali is a very high yielding variety, both for soil and substrate, for heated and unheated intensive cultivation. Highly resistant to Scab and intermediate resistant to Cucumber Mosaic Virus, Powdery and Downy Mildew.

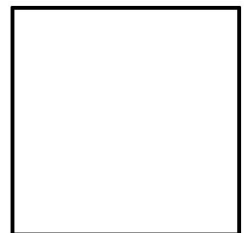

## 6. Long Cucumber - Bastos F1 (indoor crop)

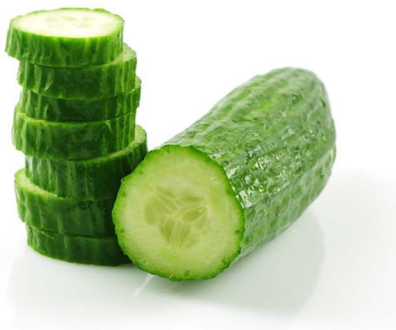

A productive, all female flowering, parthenocarpic hybrid of the Long Dutch type cucumber. It produces 36 cm long, straight fruits, which are dark green in colour and slightly ribbed with a small neck. Plants are vigorous and tolerant to Powdery Mildew and resistant to Scab. Bastos has a good shelf life and is especially suitable for areas where Mildew is a problem.

## 7. Long Cucumber - Telegraph Improved (indoor crop)

A productive, mixed flowering variety of the Long Dutch type cucumber. It produces 28-32 cm long, smooth, straight fruits, which are dark green in colour and slightly ribbed with a small neck. Plants are vigorous. Medium maturity.

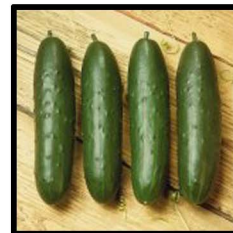

# CUCUMBER SEEDS

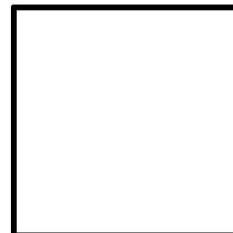

## 8. Slicing Cucumber - Prima Top F1 (in- & outdoor crop)

Prima Top is a very early, predominantly female-flowering hybrid slicer type for production in unheated greenhouses and open field. Vigorous and productive plants. Fruits are 20-22 cm. in length, dark green in colour and fairly smooth. Suitable for long transports thanks to its holding ability. Prima Top is highly resistant to Scab and intermediate resistant to Cucumber Mosaic Virus.

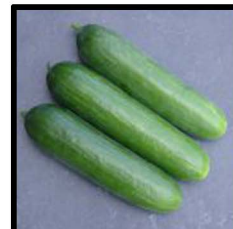

## 9. Slicing Cucumber - Prima Star F1 (in- & outdoor crop)

A very early, predominantly female-flowering hybrid slicer type for production in unheated greenhouses and open field. Plants grow strong and are very productive. Fruits are 20-22 cm in length, dark green in colour, white spined and rather smooth. Prima Star is highly resistant to Scab and intermediate resistant to Cucumber Mosaic Virus and Powdery Mildew.

## 10. Beth Alpha F1 (outdoor crop)

Early, pre-dominantly female flowering variety with vigorous plants and high yields. Maturity approx. 55 days from sowing. Fruits are medium to dark green, rather smooth and 16-18 cm in length. Suitable for all open field production seasons. Resistant/tolerant to Cucumber Mosaic Virus and Melon Mosaic Virus race 1.

## 11. Beth Alpha MR (outdoor crop)

Very early, mixed flowering variety with high yields. Fruits are medium green, rather smooth and 13-16 cm in length. Suitable for all open field production seasons. Intermediate resistant to Cucumber Mosaic Virus and Watermelon Mosaic Virus.

## 12. Ashley (outdoor crop)

Early slicing cucumber which is suitable for home garden. Fruit colour is medium to dark green. Fruit length is 19-21 cm. Flowering is mixed. Intermediate resistance to Downy Mildew.

## 13. Esmarald (outdoor crop)

Early and productive slicer type with strong vigorous plants. Pre-dominantly female flowering habit. Fruits are medium-long (22-24 cm x 6 cm), very dark green and uniform in colour. Give excellent yields. Edible maturity is 68 days from sowing. Highly Resistant to Scab, Intermediate Resistant to Cucumber Mosaic Virus, Powdery and Downy Mildew.

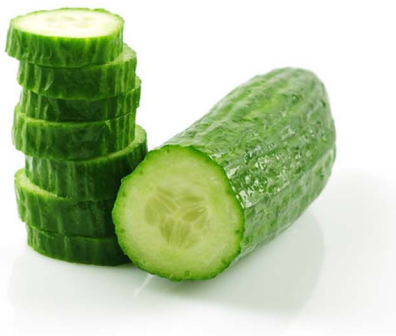

## 14. Marketer (outdoor crop)

Medium early slicer type with strong vigorous plants. Fruits are medium-long (19-21 cm), medium to dark green and uniform in colour, white spined and straight.

# CUCUMBER SEEDS

## 15. Marketmore 76 (outdoor crop)

An excellent multi resistant slicer variety. Vigorous plant-growth. Fruits are straight, uniform dark green, 22 cm. in length and mature in approximately 68 days from sowing. Resistant to Scab and tolerant to Cucumber Mosaic Virus, Powdery and Downy Mildew.

## 16. Poinsett 76 (outdoor crop)

Medium early slicing cucumber with dark green fruit colour. Fruit length is 18-20 cm and fruit skin is white spined. Suitable for market and garden. Improved Poinsett variety. Multiple resistances.

## 17. Chinese Slangen (outdoor crop)

Long slicer type with snake like fruits. Plants are mixed flowering and vigorous growing. Fruits are long (30-38 cm x 5 cm), light green in colour and with white spines.

## 18. Pickling Cucumber - Calypso F1

Early maturing, pre-dominantly female flowering pickling variety. Plants are vigorous. Fruits are straight blocky in shape, medium dark green in colour and white spined. L/D ratio is 3,1:1. Resistant to Anthracnose, Angular Leaf Spot and Scab. Tolerant to Cucumber Mosaic Virus, Powdery and Downy Mildew. Maturity is 52 days from direct seeding. Highly productive and suitable for machine or hand harvest.

## 19. Pickling Cucumber - Kariba F1

Early maturing, pre-dominantly female flowering pickling variety. Plants are vigorous. Fruits are straight blocky in shape, medium dark green in colour and white spined. L/D ratio is 3,1:1. Highly resistant to Scab, Anthracnose and Angular Leaf Spot. Intermediate resistant to Cucumber Mosaic Virus, Powdery and Downy Mildew. Maturity is 52 days from direct seeding. Highly productive and suitable for machine or hand harvest.

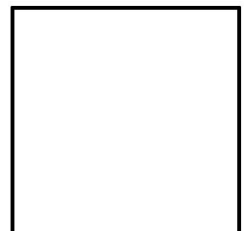

## 20. Pickling Cucumber - Wisconsin SMR 58

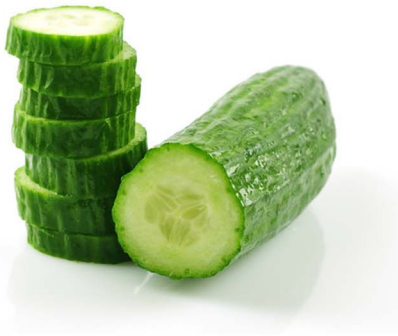

Medium early maturing, mixed flowering pickling variety. Plants are vigorous in growth. Fruits are straight blocky in shape, medium dark green in colour and with black spines. L/D ratio is 2.9 : 1. Resistant/tolerant to Cucumber Mosaic Virus and Scab. Maturity is 58 days from direct seeding.

## 21. Pickling Cucumber - Vert petit de Paris

Medium early maturing, mixed flowering pickling variety. Popular variety which is suitable for home garden. Hand harvest. L/D ratio is 2.9 :1. Fruits are medium green and with black spines.

# CUCUMBER SEEDS

## 22. Pickling Cucumber - Delicatess

Pickling cucumber which is most suitable for home garden. L/D ratio is 3,2:1. Fruit skin is smooth and colour is medium green. Hand harvest.
