KOHLRABI SEEDS

1. Purple Vienna

Plant height is approximately 35 cm. Leaf and stem are purplish-green. The bulbs have purple skin but with white flesh and globular shape. Should be used when about 5 cm in diameter, otherwise flesh can become woody. Standard variety used by home and market gardeners. Early-middle maturity, 60-65 days from seeding.

2. Wener Witte (=White Vienna)

Plants 25-30 cm tall. Slender stems. Bulbs light green colour with white flesh and globular shaped. Best eaten when about 5 cm in diameter. Early-middle maturity, about 60 days from seeding.
