MELON SEEDS

1. Antalya F1

Early Galia type. Plants are vigorous with excellent fruit setting. Fruits are 1-1,5 kg in weight, round in shape, orange-yellow at full maturity and with netted rind. Flesh is light green in colour, very sweet and aromatic with a small seed cavity. Multiple resistant.

2. Ananas F1

Ananas type with resistance to Powdery Mildew Race 1. This variety has a maturity of around 100-110 days. The oval fruits are light orange with a fine netting and creamy white flesh which is very sweet and aromatic.

3. Charentais

Early and productive variety. Fruits weigh approx. 1 kg and have a creamy-grey rind with green ribs. Flesh colour is orange and has an aromatic flavour.

4. Hale's best Jumbo

A widely adapted melon with medium maturity. Flesh colour is orange, rind is heavy netted with medium sutures. The shape is short oval. Suitable for tunnel, as well as outdoor.

5. Ananas

Ananas is a medium-late variety, which produces oval shaped fruits weighing 1,5-2,2 kgs. Rind is fine-netting and orange at full maturity. Flesh is creamy white. Aromatic fruits with excellent taste. Maturity is approx. 110 days from direct seeding. Outdoor variety.

6. Jaune Canari PMR

Strong growing plants with Powdery Mildew resistance. Fruits are large (25x15 cm), 2,0-2,5 kg in weight, long oval in shape, with bright yellow colour at full maturity and with smooth skin without sutures. Flesh is white and sweet. Good shipping ability for long distance markets.

7. Jaune Canari

Medium to late maturity. Fruits are long oval in shape and weigh 2-2,5 kgs. Skin is very tough and somewhat wrinkled. Skin colour is yellow. Flesh is pale green to white, firm and sweet. Good keeping quality, stands transport well.
