PUMPKIN SEEDS

1. Winsor F1

Fresh market type. Maturity early: 100 to 110 days. Fruit: deep flat shape, weight 8 - 9 kg, white exterior colour, orange interior colour, slightly ribbed. Seed cavity is medium. Flesh quality thick & firm. Small blossom scar. Very good uniformity and good storage quality. Plant type is semi-bush with bright green leaves. Field tolerance to Powdery Mildew.

2. Flat White Boer

Flat-shaped pumpkin with medium ribbing. Skin colour is white, flesh colour yellow-orange. Fruit weight up to 7 kg.

3. Big Max

Fruit up to 50 cm in size, weight often 25 kg, but can be grown up to 40 kg and more. Nearly round, pinkish-orange skin, ribbed and faintly sutured. Flesh is thick, orange-yellow and stringy.

4. Hundredweight

A superb variety that produces enormous yellow/orange-skinned fruits - great for competitions, but also delicious to eat! The yellow flesh gives colour in salads or pickles and the leaves can be cooked like spinach.
