1. Lebanese type Baliza F1

A uniform, highly productive Lebanese-type summer squash. Vigorous plants, with good leaf coverage. Baliza has a blocky, tapered fruit-shape. Fruits are 14-16 cm in length, light green with a greyish undertone colour. Very easy to pick. Maturity is approximately 52 days after direct seeding. Intermediate resistance to Zucchini Yellow Mosaic Virus and Watermelon Mosaic Virus.

2. Lebanese type Clarion F1

A very early hybrid variety with fruits, which are of a mottled light green colour. Clarion is very well adapted for stuffing. Clarion has an open plant habit and dark green leaves. Fruits are slightly tapered and 14-16 cm in length. With this variety it will not be a problem to obtain high yields.

3. Lebanese type Roba F1

A very early Lebanese type hybrid. Plants are vigorous and with open habit. Fruits are uniform, 15-17 cm in length and slightly tapered in shape. Color is light to medium green with grayish undertone. With this variety it will not be a problem to obtain high yields.

4. Lebanese type White Bush F1

A very early high yielding hybrid, even under adverse weather conditions. Suitable for early spring planting, but can also be sown in autumn for concentrated yields at the beginning of the season. Bush type. Fruits are straight, almost cylindrical, 16-20 cm in length, greenish white, smooth and with pleasant flavour.

5. Lebanese type White Bush

Early and high yielding bush type summer squash. Fruits are straight, almost cylindrical, 16-20 cm in length, greenish white, smooth and with pleasant flavor.

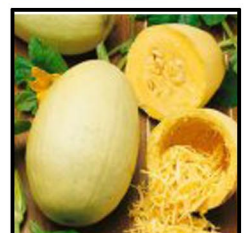

6. Winter type Waltham Butternut

Delicious butternut for fall and winter with improved fruit uniformity and increased yields. Interior is solid and dry. Excellent for storage. Small seed cavity. Ready about 85 days after sowing.

7. Winter type Vegetable Spaghetti

Medium late variety with thin, creamy and stringy flesh. Fruit size is 26x12 cm. Fruit colour is beige-tan.

8. Zucchini type Bassein F1

Extra early dark green zucchini hybrid with uniform, cylindrical fruits. The plants are upright, sturdy and open. A very productive hybrid with good quality fruits and easy to pick. Intermediate resistance to Zucchini Yellow Mosaic Virus.

9. Zucchini type Black Beauty

Extra early, prolific Zucchini type with slightly mottled, dark green and uniform, cylindrical fruits. The plant is upright, sturdy and open. A productive variety with good quality fruits and easy to pick.

10. Zucchini type Diamant F1

Widely adapted zucchini hybrid. Fruits are cylindrical and 18-20 cm long. Fruit colour is dark green.

11. Zucchini type Golden

An early, high yielding zucchini with uniform, golden yellow fruits. Fruits are smooth, cylindrical in shape, 18-20 cm in length and are well concentrated on a compact plant, which has an open growth habit. The tender, creamy white flesh has excellent flavour and is tastiest when picked early. Maturity is 53 days from direct sowing.

12. Zucchini type Quarantaine

Very early variety with distinctive appearance. Edible in approximately 51 days from sowing. Plant is a low growing, open bush, leaves are dark green with grey flecks and lobed. Fruit is cylindrical, slightly tapered toward the stem end, 19 x 6 cm in size, light greyish-green, striped brokenly with a darker green. White-creamy interior. Excellent yielder.

13. Zucchini type Storr's Green F1

Highly productive over a long period Storr 's Green is grown throughout the world. The compact plants have an open habit for easy picking. Fruits are smooth, 18-20 cm in length, cylindrical in shape with a fine, crisp texture and a medium-dark green skin with light green flecks. Extremely early Zucchini type hybrid.
